

BLUEPRINTRF™

CONFERENCE MANAGEMENT

Customize your network services to a guest's specific needs. Fast.

From small break-out sessions to large ballroom events, we understand conference planners need consistent, high-speed internet access for their attendees. No matter the size of the event, your system will be prepared.

That's why we have used our long hotel experience to design a Conference Management application specifically for the hospitality industry, which puts conference room connectivity in the hands of hotel management. With a few clicks, you can designate a meeting room's Wi-Fi for a specific time with a network name and password of your guest's choice.

That way you don't need to use technical support every time you or a customer holds a meeting. All our network services customers can use the Conference Management application at no additional cost.

Here are some of the features:

- EASY-TO-SCHEDULE EVENT AND DETAIL CALENDAR
- PUBLIC IP ADDRESSES AND ADDITIONAL PORTS
- VLAN CONFIGURATIONS
- HIGH-QUALITY REMOTE SERVICES
- BANDWIDTH SHAPING
- 24/7 REMOTE SUPPORT WITH DESIGNATED AGENTS
- SECURE SSID FOR EACH EVENT
