

# CUSTOMER DASHBOARD

See all your network's activity at a glance. In real time.

High-speed and reliable Internet access is one of the most visible amenities hotels and airports can offer their guests. Our web-based Dashboard lets you stay on top of guest connectivity and react quickly when glitches arise because we know quality Wi-Fi is critical to strong guest satisfaction scores.

The Dashboard gives you a comprehensive, easy-to-understand view of all your critical network activities. This secure and permissions-managed tool is a "right now" look into how your network's doing, so you can address performance issues before they become performance problems. It's the kind of savvy insight that strengthens your business for continued growth.

You'll see several summary views on your Dashboard at the same time. Each window shows you the critical success areas (and live data) that are needed to produce a successful connected session, every time. These metrics include:

- OVERALL BANDWIDTH CONSUMPTION
- DEVICE UPTIME REPORTS
- CALL CENTER REPORTS AND ACTIVITIES
- TOP 10 URLS
- BANDWIDTH CONSUMPTION BY CIRCUIT
- TOTAL NUMBER AND TYPE OF CONNECTED DEVICES
- MAJOR TRAFFIC TYPES (SUCH AS TRAVEL, SHOPPING, SOCIAL MEDIA, PEER-TO-PEER)
