

BLUEPRINTRF

DOMINION PLATFORM

Integrate three appliances into one platform for seamless network service.

A network needs all three appliances. Many providers stack disparate versions on top of each other, and often that means they don't work well together, as useful features must be disabled for the entire stack to pass Internet traffic without incident.

That's one unique thing makes us different. Dominion, our cutting-edge, on-site network solution gives you all that in a single, seamless platform. It integrates all three of those network appliances into one architecture that works in unison. So it works much, much better. It's also far less costly than the typical network stack, and more energy-efficient.

Dominion also collects and archives all critical network information in our cloud-hosted data warehouse, Master Data Management Source (MDMS). This data is then lifted from Dominion (and other sources) into our unique cloud-hosted application, the Dashboard. The Dashboard displays multiple "summary views" that display critical network activities, so you know about performance issues before they become performance problems.

- ▶ **CIRCUIT LOAD BALANCING:**
ENSURE ALL YOUR GUESTS RECEIVE THE BEST SPEEDS POSSIBLE
- ▶ **GATEWAY AUTHENTICATION:**
7-LAYER SECURITY PROTECTS YOUR NETWORK FROM MALWARE, VIRUSES
- ▶ **PACKET SHAPER:**
PRIORITIZE SPECIFIC NETWORKING NEEDS AND INTERNET ACTIVITIES
