

BLUEPRINTRF™

TURN-KEY NETWORK DELIVERY

Get the network you want. Delivered to you. Ready to go.

You don't have to be a network expert to get the network you want. We'll build it for you, and then do a lot more than hand you the keys and say goodbye.

Because a reliable network is about more than hardware and software. It's a relationship you can depend on and trust. Here's how we build a relationship with you:

- **THE INITIAL CONSULTATION:** Tell us your connectivity needs and goals.
- **PHYSICAL SITE SURVEY AND NETWORK PLAN:** Our certified engineers visit your buildings and study your usage patterns, so we can design a network that meets your unique needs.
- **PROJECT INSTALLATION:** Our in-house project management and engineering teams oversee equipment provisioning, circuit integration, on-site engineering and cabling and more.
- **QUALITY ASSURANCE TESTING AND ROUTINE REPORTING:** Our Dashboard application keeps you on top of your network's connectivity issues through on-screen displays that give you an easy-to-read, non-technical and real-time view of your network's performance.
- **SUPPORT SERVICES:** We're as close as a shout for help with a 24/7/365 Help Desk and a nationwide network of 300+ certified service technicians who can arrive at any customer site within either 4 or 24 hours.

From installation to support, we're here for you on one unified platform, so you know your network will be there for your guests.
