OUR WI-FI MONITORING SOFTWARE

BLUEPRINTRF™
NETWORK INTELLIGENCE

Customer Dashboard

We built this industry-leading tool exclusively for Hospitality, and here are four reasons why it's still on top.

1.

Our Dashboard gives you a more in-depth understanding into your guests' Internet habits. The more data it collects, the better it forecasts your hotel needs from bandwidth distribution to eventually upgraded hardware.
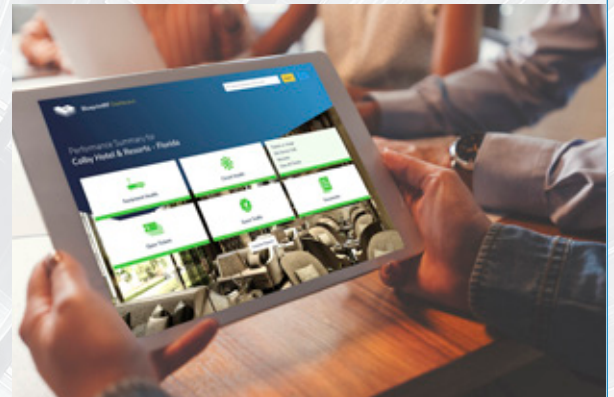

2.

We designed the Dashboard with a simple interface so that you can see your network's health at-a-glance. Green means good; Red means a challenge. Plus, colorful charts and graphics help you pinpoint granular issues.

3.

While you can focus on high-level needs like equipment and circuit health, we built the Dashboard for you to delve even deeper into your guests' Internet habits like guest traffic details, domains, PMS status, and access to custom reports.

4.

Data is king in today's world. The Dashboard organizes your live data and gives you a remarkably deep dataset, which can guide your decisions on needed upgrades, budgeting, or daily insights on guest Internet usage.
