OUR WI-FI SERVER SOLUTION

DG2

Four reasons why our upgraded
Wi-Fi network server and its new
features can help grow your business.

1.

DG2 (Dominion Gateway 2) isn't a cookie-cutter,
out-of-the-box solution. Our technology team **created
this innovative platform with modern hotel standards
top of mind** and expanded beyond them to create a
product that redefines Hospitality Wi-Fi.

2.

We've engineered DG2 to deliver **40 gigabits per
interface** for a superior guest experience and more than
200 new features - from content filtering to bandwidth
distribution. We also added High Availability (HA)
Clustering to eliminate single points of failure.

3.

DG2 gives you everything in a single, seamless
platform. It integrates three network appliances into one
architecture that works in unison for a more dynamic
Hospitality solution. It's also **far less costly than the
typical network stack and more energy-efficient.**

4.

Our gateway runs seven layers thick and gives you
the power to **manage every aspect of your guests'
Internet experience**. Plus, DG2 never lets its guard
down with daily backups and high-level defenses
like IDS and MNF monitoring for your Wi-Fi network.
